| Project Name | Emerging Methods for Early Detection of Forest Fires. |

Solution Architecture:

A complicated process with numerous sub-processes, solution architecture connects business issues with technological solutions. Its objectives are to

- Track down the most effective technological remedy for current business issues.

- Explain to project stakeholders the structure, traits, behaviour, and other features of the software.

- Specify the features, stages of development, and requirements for the solution.

- Offer guidelines for how the solution is created, managed, and delivered.
